

Project Name

Comic Craft AI

Good morning everyone. Our project name is ComicCraft – AI Comic Story Creator using Gemini Models.

ComicCraft is an AI-based application that helps users create comic stories from their own ideas.

Purpose of the Project

9/26/2026

2

The main purpose of our project is to make comic creation easier and faster using Artificial Intelligence. Normally, creating a comic requires story writing, character creation, scene planning, dialogues and designing. ComicCraft combines these steps and helps the user create a comic story from a simple idea or prompt.

Benefits of the Project

ComicCraft has many benefits. It saves time and reduces the effort required to create a comic. Users can generate stories, characters, scenes and dialogues easily. It can be useful for students, beginners, creative writers and people who are interested in creating comics. It also helps beginners convert their creative ideas into a complete comic story.

Project Execution

Now I will explain how our project works. First, the user enters an idea or story prompt in the application. The input is processed using Gemini AI models. Based on the user's input, the system generates the story content, characters, scenes and dialogues. The generated content is then arranged into comic panels. We can preview the generated comic and check whether the story and scenes are working correctly. Finally, the completed comic is prepared as the final output.

Final Output

The final output of our project is a complete AI-generated comic story. It contains the story, characters, scenes and dialogues arranged in comic format. The user can view the comic preview and generate the final comic output. This makes the overall comic creation process simple, quick and user-friendly.”

THANK YOU!!
